HomeCU Now Available in Online Version

Testing Nears Completion at 5 Credit Union Clients

BOISE, ID (Sept. 17, 2001) - Database Management Services, Inc. (DMS), a growing provider of Internet banking solutions for credit unions, announced today that its popular home banking solution, HomeCU, is now available in an online, real-time version.

Dubbed HomeCU Live, the system is already in the final phases of testing at 5 separate credit unions throughout the country. Utilizing virtual private network (VPN) technology, HomeCU Live offers credit unions the highest level of security while keeping costs low.

"HomeCU Live leverages the extensible architecture of our original platform to deliver features that set it apart from other real-time solutions," said Joe Pearson, DMS President. "The efficiency of the solution makes it very affordable. This means real-time home banking is now within the reach of more credit unions than ever."

Through proprietary "multi-tiered data caching and persistence", HomeCU Live delivers information to member's browsers almost as fast as the HomeCU batch system using a data-warehouse.

About HomeCU

HomeCU is the innovative home banking solution developed exclusively for credit unions and proven nationwide since 1995. HomeCU is secure, cost-effective, and very easy to use. The service platform and architecture result in rapid implementations and allow HomeCU to integrate easily with many different data processing systems. HomeCU is a truly turnkey Internet Banking solution. Additional information is available at www.homecu.com.
