HomeCU Home Banking To Offer “Switch Accounts” Feature

BOISE, ID (April 16, 2004) – Database Management Services, Inc., is pleased to announce that a new “Switch Accounts” feature is now available to credit unions using the company’s HomeCU home banking software. This enhancement will allow credit union members using Internet banking to switch to another account number without having to log off and back on with the new account number.

“The initial response to this new feature has been amazing,” notes Joe Pearson, President of DMS. “In the two weeks since we began offering it, more than 40 of our current clients have signed up for the ‘Switch Accounts’ option.”

Unlike many software packages which require users to purchase a new upgrade every year or two, HomeCU is truly “versionless.” In other words, HomeCU clients never have to wait for the next version to be released; instead, the company offers enhancements like “Switch Accounts” on an ongoing basis, all at no additional charge.

Credit Unions can easily add “Switch Accounts” to their HomeCU home banking systems by contacting DMS. Individual members can then sign up for the feature by contacting the credit union.

HomeCU is the innovative home banking solution developed exclusively for credit unions and proven since 1996. Currently, more than 250 credit unions in 42 states use HomeCU. Full-featured, secure, and cost-effective, HomeCU integrates securely with 16 different data processing systems and includes e-statements, online member surveys, multiple levels of admin security, and a domain-based hosting and e-mail server. Additional information and a live demo are available at www.homecu.com.
